Deep domain knowledge.

Experience to cater to cross border projects in infrastructure, heavy industry, automobile, energy, IT.

Unique acumen.

Design and delivery of complex and large-scale VM projects for government .

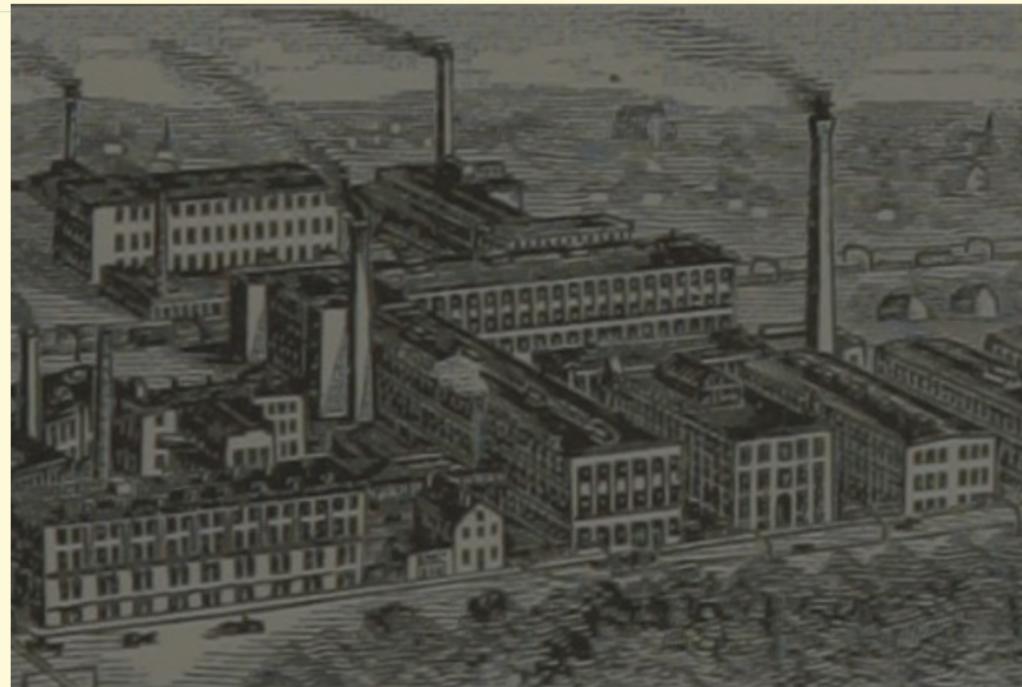

ABOUT VALUE MANAGEMENT

The Concept

Value Methodology (VM), also known as Value Analysis, Value Management, Value Methodology or VAVE (Value Analysis / Value Engineering) is a transformative approach and a systematic technique designed to enhance the value of products, services, systems, and processes.

By rigorously evaluating their functions, VM aims to boost performance, improve quality, optimize resources, and ensure reliability, while maintaining other desirable characteristics

The Origin

First introduced at General Electric during World War II, VE emerged out of the urgent need to address raw material shortages and skill deficits. Initially termed “Value Analysis” or “Value Control,” the method rapidly proved its efficacy in reducing costs while resolving these challenges.

Over the past 76 years, VM has evolved into a versatile, flexible, and innovative technique, capable of integrating with various other tools and methodologies to suit specific sectoral and geographical contexts.

ENVAL Conducts both modular and customised training programs for corporates, government, and CSR. These are on-demand trainings followed by examination and certification.

An important component is the hands-on workshop for application of VM for live projects or identifying solutions. ENVAL Experts also mentor for execution of these projects as per requirement.

TRAINING FOR ORGANISATIONS

ORGANISATIONAL TRAININGS

ENVAL Conducts both modular and customised training programs for corporates, government, and CSR.

Modular Training Programs

- Training content is standardised
- Certification of Indian Value Engineering Society (INVEST) or SAVE International is optional
